

Atherton Scrubwren *Sericornis kerri* Species No.: 946 Band Size: 01

Morphometrics:

	Male	Female
THL:		
Wing:	58 - 61 mm;	54 - 58 mm;
Tail:	42 - 49 mm;	40 - 50 mm;
Tarsus:	22.6 - 23.6 mm;	20.2 - 23.6 mm;
Weight:	10.0 - 13 g;	8.9 - 13 g;

Ageing :

Difficult to separate immatures and adults, but some juvenile remiges and rectrices may be retained in immatures.

Moult to adult plumage at approximately one year of age. So adults (1+), immatures (1).

Sexing

No difference in plumage.

Males slightly larger than females, but overlap in all measurements makes sexing by this method unreliable.

Not known whether both sexes incubate.

Similar species:

There is a small overlap, but most birds can be separated from Large-billed Scrubwren *Sericornis magnirostris* by tarsus length:

S. magnirostris tarsus < 22.0 mm; *S. kerri* tarsus range 20.2 - 23.6 mm;
