

Grey-headed Robin *Heteromyias albispecularis* Species No.: 389 Band size: 03 (04)

Morphometrics:

	Adult Male (2+)	Adult Female (2+)
THL:	47 – 49 mm	44 – 47 mm
Wing:	105 – 116 mm	101 – 115 mm
Tail:	66 – 80 mm	68 – 75 mm
Weight:	28.3 – 43.5 g	26.5 – 42.0 g

Ageing:

- Breeding recorded from July through February;
- Most juvenile body feathers are moulted within 3 months of fledging;
- Immature is mostly as adult but with retained dark brown juvenile alula, greater primary coverts, remiges and rectrices.
- Immatures best distinguished from adults by presence of brown tips to retained juvenile greater secondary coverts and rectrices are narrow and more pointed at tips than adult;
- Timing of moult to adult plumage not positive, but probably coincides with post-breeding moult of adults after the breeding season following fledging.
- Immatures will be either (1) or (2-) and adults (2+).

Sexing :

Not sexually dimorphic by plumage or measurements.
Incubation by female only.
