

Pale-yellow Robin *Tregellasia capito*

Species No.: 396 Band size: 01

Morphometrics:

	nominate <i>t.c. capito</i>		ssp. <i>T.c. nana</i>	
	Adult Male	Adult Female	Adult Male	Adult female
THL:				
Wing:	73 – 85	74 – 82 mm	72 – 86 mm	67 – 78 mm
Tail:	53 – 61	51 – 58 mm	42 – 57 mm	44 – 52 mm
Weight:	12.5 – 18.2 g	11.4 – 14 g	8 – 18.3 g	10 – 13.3 g

Ageing:

- Most juvenile body feathers are moulted within 3 months of fledging;
- First immature is mostly as adult but with retained dark brown juvenile alula, greater primary coverts, remiges and rectrices. Retained tertials and secondaries have noticeable buff or light-brown suffusion to tips;
- Moulting to adult plumage completed in second Summer coinciding with adult post-breeding season moult;
- Immatures are therefore either (1) or (2-);
- Adults are (2+).

Sexing:

Not sexually dimorphic in either plumage or morphometrics;
 Males are marginally larger than females but there is insufficient data to use any measurements to reliably separate the sexes;
 Only the female broods.
