

White-browed Robin *Poecilodryas superciliosa*

Species No.: 390 Band size: 02

Morphometrics:

	<i>P.s. superciliosa</i>		<i>P.s.cerviniventris</i>	
	Adult Male	Adult Female	Adult Male	Adult Female
THL:				
Wing:	75 – 84 mm	73 – 79 mm	84 – 93mm	77 – 85 mm
Tail:	61 – 70 mm	58 – 63 mm	66 – 77 mm	62 – 72 mm
Weight:	17 – 22.5 g	15 – 17 g	20 – 25.5 g	15 – 23 g

Ageing:

Moult to immature plumage commences immediately upon fledging;
First immatures retain juvenile remiges and rectrices and at least the outer 2-3 greater primary coverts and alula. Contrast between retained juvenile and adult feathers reliably ages immatures;
Full adult plumage attained in moult early in second year, coinciding with adult post-breeding moult;
Thus immatures (2-) and adults (2+).

Sexing :

Not sexually dimorphic on plumage, but males are much larger than females;
Overlap in wing length and tail length will not positively sex all birds.
Data on THL and/or wingspan may provide more reliable sexing criteria.
Only female incubates.
