Colour Banding of Rainbow Bee-eater

During the last week of December 1976, a number of breeding Rainbow Bee-eaters *Merops ornatus* was colour-banded in the Warbung Ranges, north-eastern Victoria. Each bird was marked with a single solid-colour band on the left or right tarsus, in most cases putative males (with long tail rachets) on the left and putative females on the right. Sightings along migration routes or in the wintering areas would be greatly appreciated.

Details of observations may be reported to the Secretary, Australian Bird-banding Scheme or to the project leader.
