

RECOVERY ROUND-UP

This section is prepared with the co-operation of the Secretary, Australian Bird-Banding Scheme, CSIRO Division of Wildlife and Rangelands Research. The recoveries are only a selection of the thousands received each year; they are not a complete list and should not be analysed in full or in part without the prior consent of the banders concerned. Longevity and distance records refer to the ABBS unless otherwise stated. The distance is the shortest distance in kilometres along the direct line joining the place of banding and recovery; the compass direction refers to the same direct line. (There is no implication regarding the distance flown or the route followed by the bird).

Recovery or longevity items may be submitted directly to me where-upon their merits for inclusion will be considered.

— Hon. Editor.

Obituary

John Douglas Gibson, one of our foundation members, died on 21 May 1984 after a long illness. He was one of the small group of banders who visited the Five Islands, N.S.W., in 1955 to commence a study of Silver Gulls and Crested Terns, one of the initial co-operative studies of the Australian Bird-Banding Scheme. His interest in the Five Islands continued and expanded into a broader ornithological involvement on committees of various trusts and societies of the south coast of N.S.W.

Also, in 1955 he recognised the potential of a winter feeding site of the Wandering Albatross at Bellambi, N.S.W., where he demonstrated that the birds could be captured and banded with relative ease. The albatross banding project commenced in 1956, and his reports of the N.S.W. Albatross Study Group give some indication of the truly exciting data obtained and the scale of the enthusiastic international co-operation that study stimulated.

The project continues, and Doug will always be remembered for this contribution to ornithology by his colleagues at home and abroad.

Our profound sympathy goes to Betty, his wife, and to their daughters, Jacqueline and Terrie.

M.D.M.

Corrigendum

The following amendment should be made to Volume 8, Number 3, September 1984.

Page 62, Table 1.

The mean weight of female Little Eagle *Hieraetus morphnoides* should read 1110 g not 111.0 g.
