## SEDENTARINESS AND SURVIVAL OF WHITE-BROWED SCRUB-WRENS IN THE BRINDABELLA RANGE, AUSTRALIAN CAPITAL TERRITORY

S. J. WILSON

56 Harrington Circuit, Kambah, ACT 2902

*Received 31 August, 1993*

White-browed Scrub-wrens have been banded at New Churns Road in the Brindabella Range, Australian Capital Territory since 1961, as part of a larger bird-banding study. Adult White-browed Scrub-wrens were sedentary, and during the period 1961-82 their mean annual survival rate was 65 per cent. This compares with an annual survival of 77 per cent for adult White-browed Scrub-wrens in south-west Western Australia.
