## **The “Nonnac” Method of Netting Wild Birds**

IAN ROWLEY and G. S. CHAPMAN

A propulsive device called a “Nonnac” was used to capture 2 060 Galahs between 1971 and 1976 in the Western Australian Wheatbelt. Two nets each 36 m<sup>2</sup> were projected by Nonnacs over birds feeding at prebaited sites. The Nonnac itself, its manufacture, and the use of this technique for capturing Galahs are described in detail.
